

GlowUp Salon Booking App – Design Rationale

Project Overview

GlowUp is a mobile-first salon appointment booking application designed to simplify the booking experience for salon customers. The app helps users easily explore salon services, select available dates and time slots, and confirm appointments without confusion or long waiting times.

Problem Statement

Many local salons still manage appointments using phone calls, WhatsApp chats, and manual registers. This often causes missed bookings, scheduling conflicts, poor customer experience, and difficulty managing appointments efficiently.

Target Users

- Salon customers aged 18–35
- Users who prefer quick online booking
- Busy professionals and students
- First-time users needing simple navigation

Design Goals

- Reduce booking friction
- Create a premium salon aesthetic
- Maintain visual simplicity
- Improve readability on small mobile screens
- Make interactions touch-friendly and intuitive

Visual Design Decisions

Soft pink tones were used to create a beauty-focused aesthetic, a welcoming elegant feel, and strong visual consistency across all screens.

Typography

Poppins font style was selected to maintain a modern, clean, and readable mobile interface with proper visual hierarchy.

UX Decisions

1. Simple Booking Flow

The app follows a minimal booking journey from Home → Service Details → Date & Time Selection →

Confirmation.

2. Card-Based Layout

Services are grouped inside cards for better organization and easier scanning.

3. Touch-Friendly Components

Buttons and chips use rounded corners, proper spacing, and large touch areas to improve usability.

4. Clear Confirmation Feedback

A confirmation screen reassures users that their booking was successful and displays appointment details clearly.

Screens Designed

1. Splash / Welcome Screen
2. Login Screen
3. Home Screen
4. Service Detail & Booking Screen
5. Appointment Confirmation Screen

Tool Used

- Figma

Outcome

The final design delivers a clean and modern salon booking experience with a smooth appointment flow and professional mobile-first UI.
